

XPRO GEARED HEAD - DATASHEET

XPROgeared head

The new XPRO Geared Head ensures: **portability**, thanks to its Adapto body; **framing precision** with its micrometric knobs; **convenience**, thanks to its 200PL universal camera plate.

KEY BENEFITS:

Lightweight – Adapto Technopolymer Body

This head by Manfrotto weighs only 0,75 kg (1.65 lbs), but can support a payload of up to 4 kg / 8.8 lbs.

Its Adapto body - a strong, rigid technopolymer- makes this head the lightest and most precise ever created by Manfrotto.

Adapto Body

Framing and composition – Micrometric Knobs

The geared movement allows users to frame images precisely - one micro step at a time - on **all three axes**.

The knobs ensure ergonomic comfort even during extensive usage.

In addition, in order to make large framing adjustments, the locking system can simply be loosened by pushing the knob against the levers.

Geared technology by Manfrotto is patent pending.

Micrometric Knobs

Convenience - 200PL Plate

The XPRO Geared head features the most common photographic plate in the world so there's no need to use different plates when switching to other Manfrotto supports. The new XPRO Geared Head features the 200PL Light, which ensures great rigidity and improved grip. All in one lightweight photographic plate.
