

SW150 LENS ADAPTOR Canon 11-24mm lens

SW150
Mark II filter system

An SW150 Lens Adaptor is now available for the Canon EF 11-24mm f4L USM Lens.

Please note that due to the physical size of this lens, and the extremely wide angle of view, the SW150 filter holder will vignette (or rather, the filter guides intrude into the edges of the image) at the widest angles. To avoid any vignetting we recommend using a minimum focal length of 13.5mm when using the filter holder with two filter slots and 12.5mm when using the holder with one filter slot.
